2015 Rate Meetings May 5, 2015

Presented by: Louis Kosiba, Executive Director <u>lkosiba@imrf.org</u> 630-368-5355

Mark Nannini, Chief Financial Officer mnannini@imrf.org 630-368-5345

Agenda

- Actuarial Principles
- Triennial Experience Study
- 2014 Returns & Impact
- GASB 68
- Appendix

- IMRF is an Agent Multiple Employer Public Employee Retirement System
- Each employer pre-funds retirement benefits for its employees
- Contributions are pooled for investment purposes
- The same actuarial assumptions apply to all employers (except 3 which are individually rated)

Actuarial Valuation Methods

- Aggregate entry age actuarial cost method of valuation
- Costs to fund the pension are set at a level percent of payroll

Actuarial Cost Methods

- Assumes investment income fully each year
- Differences between actual and assumed investment income are phased in over a closed 5 year period subject to a 20% corridor

- Each year the actuarial liabilities of IMRF are calculated as part of the December 31st valuation
- To perform the evaluation, IMRF's actuaries make assumptions about the future experience of IMRF regarding various risk areas
- The results of the liability calculation depend upon those assumptions

- No single set of assumptions will be suitable indefinitely
- Things change, and our understanding of things (whether or not they are changing) also changes
- IMRF statutes require reviewing assumptions every 3 years
- A systematic review of assumptions is called an "Experience Study"

- Annually
 - Actuarial Valuation
 - Gain/Loss Analysis
 - 50 Year Projection Report
- Triennial Experience Study
 - 2011-2013 (Latest)
- Asset Liability Modeling Study in 2016

Primary Risks:

Demographic:

Normal Retirement; Early Retirement; Death-in-Service; Disability; Separations; Merit/Longevity Pay

Mortality:

Pre and Post Retirement

Economic:

Price Inflation; Wage Inflation; Investment Return

Demographic

- Retirement rates
 - various experience (increase in rates)
- Death-in-Service
 - fewer deaths (increase in rates)
- Disability
 - lower occurrences (decrease in rates)
- Separations
 - higher occurrences (decrease in rates)
- Merit/Longevity Pay
 - lower experience (decrease in rates)

Mortality

- Society of Actuaries released new mortality tables in October 2014
 - (RP-2014 tables; MP-2014 projection scale)
- Future improvements in mortality are recognized to:
 - ensure adequate funding
 - avoid liability losses
 - comply with actuarial best practices
 - avoid cost shifts to future generations

Mortality (continued)

- RP-2014 adjusted to match current IMRF experience
- Apply fully generational MP-2014 projection scale moving forward
 - more dynamic
 - based on both age and year of birth
 - anticipates/incorporates changes in life expectancy (new)

Economic Assumptions

- Price inflation; Wage Inflation; Investment Return
- These economic assumptions need to be consistent with one another
- Long-term averages
- Lowered price inflation from 3.0% to 2.75%
- Lowered wage inflation from 4.0% to 3.5%
- Maintained investment return at 7.5% (based in part on current asset allocation)

Employer Reserve Statements:

- IMRF provided employer reserve statements in February 2015.
- Statements show employer funds on deposit for current active and inactive members and current year activity
 - Employer retirement contributions
 - Interest credited @ 7.5% less funding for employee and annuitant reserves
 - Adjustments, if any
 - Reductions for 2014 retirees

Preliminary Rate Notices for 2016:

- April 2015
 - Preliminary rate notices available
- April 2015 October 2015
 - Staff reviews rates to ensure accuracy
- November 2015
 - Final notices available

GASB 50 Disclosures (Available April 2015)

- Show funded status of each employer plan for last three years for its active and inactive members only
- Reflects **actuarial** funded status using five-year smoothing of investment returns subject to 20% corridor
- Footnote on schedule discloses funded status on market basis
- Actuarial funding increased due to a 10.1% actuarial return (vs. 7.5%)
- Market value funding decreased slightly (6.1% return) (vs. 7.5%)

Individual Employer Funded Status

- Affected by employee demographics; employer reserve account balance; projected liabilities
- Individual employer's funded status reflects percentage funded for active and inactive employees
- It does not reflect the portion of the IMRF annuity reserve related to its retirees
- If annuity portion were added to the analysis the funded percentage would increase for unfunded plans but the unfunded dollar amount would remain unchanged

What did a 6.1% return mean for 2014?

- \$2.14 billion investment income (prior to investment expenses)
 - After \$134.5 million of direct investment and administrative expenses – Balance (\$108.1 million/\$26.4 million)
 - Credited \$1.18 billion of interest to annuitant and member reserves - Balance (\$17.9 billion/\$6.2 billion)
 - Credited \$820 million to employer reserves Balance (\$11.8 billion)
 - Approximately 5.12% of opening employer balance
 - Percentage for individual employers varies based upon relationship between its employer reserve and annuitant reserve

Member Contributions

Employer Contributions

Investment Income

Retirement Benefits

- Administrative expenses
- Direct Investment Expenses

\$ 351,089,241

\$ 923,382,825

\$2,145,958,356

\$3,420,430,422

(\$1,666,008,458)

(\$ 26,436,912)

<u>(\$ 108,165,511)</u>

(\$1,800,610,881)

Net increase

\$1,619,819,541

Impact on Funding Value

- Because of 2014 investment gain, IMRF
 - Began 2014 with \$3.1 billion of unrecognized gains for actuarial purposes
 - Ended 2014 with \$2.1 billion of unrecognized gains which will be recognized in 2017 through 2020
- Cost of Mortality Table change + \$1.5 billion
- Cost of other Economic Assumption Changes (\$.3 billion)

Impact on Funding Ratio:

In 2014

	Beginning of Year		End of Year		
	MV	AV	MV	AV	
Assets	\$33,203.00	\$30,083.00	\$34,833.10	\$32,700.20	
Liabs	\$34,356.60	\$34,356.60	\$37,465.10	\$37,465.10	
Ratio	96.6%	87.6%	93.0%	87.3%	

- Funding value was impacted by:
 - investment returns below 7.5%
- Liabilities grew due to:
 - one more year of service credit
 - investment returns below 7.5%
 - Implementation of new actuarial assumptions (\$1.2 billion)

- Governmental Accounting Standard Board implementation of GASB 67 and 68
- GASB 67, affects the financial statements of the pension system
- GASB 68 information from IMRF, affects the financial statements of the employers
- Annual GASB 50 Statements are still the same and provide employer funding information
- Focus is on cost to taxpayers over time to provide governmental services

- GASB 68 Preliminary format was released by IMRF on January 22, 2014 for the data as of 12/31/12
- Each April new information to be released
- Share with your auditors
- IMRF Actuary Gabriel Roeder Smith and Company, assisted with the compilation of the GASB 68 Implementation Guide
- New data as of 12/31/14 will be on the website soon

GASB at a Glance

- Actuarial information from GASB 68 will be available the month of May
- GASB 68 for financial information and opined upon, will be end of May or early June
- Opinions will be posed as an Addendum to the IMRF financial statements

- A questionnaire was mailed in the summer of 2014
- A mandatory application to request an opinion was sent in February 2015
- GASB 68 Actuarial data May 2015
- GASB 68 Opinion specific or general end of May or early June

Impact of GASB 68 on Employers

- IMRF.org Employers Access Section
- Provides preliminary GASB Statement 68 Employer Reports as of 12/31/13, very soon 12/31/14 will be available. (actuary)
- 12/31/13 preliminary <u>unaudited</u> information. 12/31/14 opined by IMRF auditor. (auditor)
- Not intended for early implementation.
- A new report will be provided annually.
- Information could be material for your financial statements and audit considerations.

Impact of GASB 68 on Employers

- IMRF will coordinate this information.
 - Employer uses an "application" through employer's authorized agent through employer access on the IMRF portal
 - to receive a separate opinion on employer data.
 - A separate GASB 68 report will be provided to <u>all</u> employers for <u>actuarial information</u>.
- During 2015, IMRF has embarked on a SOC 1 TYPE 2 report for controls over calculations and allocation of additions and deductions to employers. The report will be issued in early 2016.
- Employers respective auditors will need to perform their own procedures. External auditors will have the ultimate authority.
- Again, this information can be material to your financial statements if you report under GAAP and issue a formal CAFR you will need the separate opinion for your information.

AICPA - White Paper

- Plan prepares "Schedule of Changes in Fiduciary Net Position by Employer" and related notes to the schedule.
- Plan auditor is engaged to opine on the Schedule using one of two options
 - Option 1 Plan engages auditor to opine on the Schedule as a whole and to issue a SOC 1 type 2 report on the controls over the calculation and allocation of additions and deductions to employer accounts, or
 - » A SOC 1 type 2 report will be unavailable for 2014 for IMRF, but will be available in 2015
 - Option 2 Plan engages auditor to opine on each employer column
 - » IMRF will select this option for 2014 only.

SOC 1 Type 2 Reporting

- IMRF Auditors will attest to the fairness of the descriptions, and determine if controls are suitable to achieve the objectives stated.
- These controls start with the employer and the payment process to IMRF, are an example of inflows.
- Payments to members, are an example of outflows.
- Tests include the transfer and calculation of contributions.
- IMRF will continue to share further developments by GASB and the AICPA for any other matters of concern.

SOC 1 Type 2 Reporting Example

(IMRF auditors will provide assurances to your auditors)

Format

- Copies available on the employer portal
- IMRF is available to answer questions for your specific employer

- GASB 68 will impact each employer's Unfunded Annual Accrued Liability (UAAL).
- Potential for greater volatility from year to year for the UAAL, as well as for the Net Pension Liability (NPL)
 - Pension Expense at the entity-wide level will change UAAL
 - Changes in assumptions
 - Differences in expected and actual investment returns

- Net Pension Liability (NPL) recorded as a liability on Financial Statements, currently it is a footnote disclosure
- Actuarial Assets measured at market value and discounted using assumed return unless assets are insufficient then deficit is discounted using a taxexempt high quality bond rate

Appendix – Data

	2013	2014	
Amount Under Mgt.	\$33.2 billion	\$34.6 billion	
Investment Return	20.26%	6.10%	
Actuarial Return	10.4%	10.1%	
Funding Level (M)	96.7%	93.0%	
Funding Level (A)	87.6%	87.3%	
Active Members	173,481	173,963	
Retirees	106,997	111,989	
<u>Inactive</u>	<u>117,772</u>	<u>137,941</u>	
Rates (Average)	2015	2016	
Regular	11.69%	11.73%	
SLEP	22.33%	22.71%	
ECO	70.37%	86.07%	

Employee Contributions 4.5% (Reg); 7.5% (SLEP/ECO)

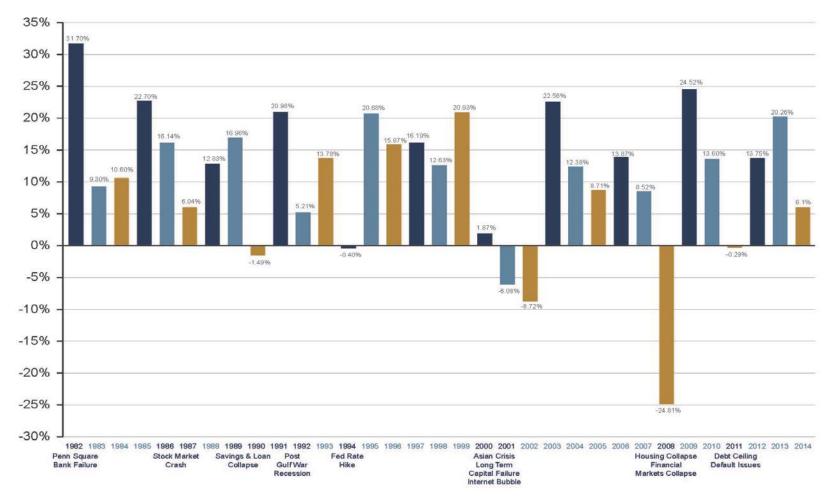

Appendix – Asset Allocation

Appendix - How is the money invested?

IMRF ANNUAL TOTAL FUND RETURNS 1982-2014

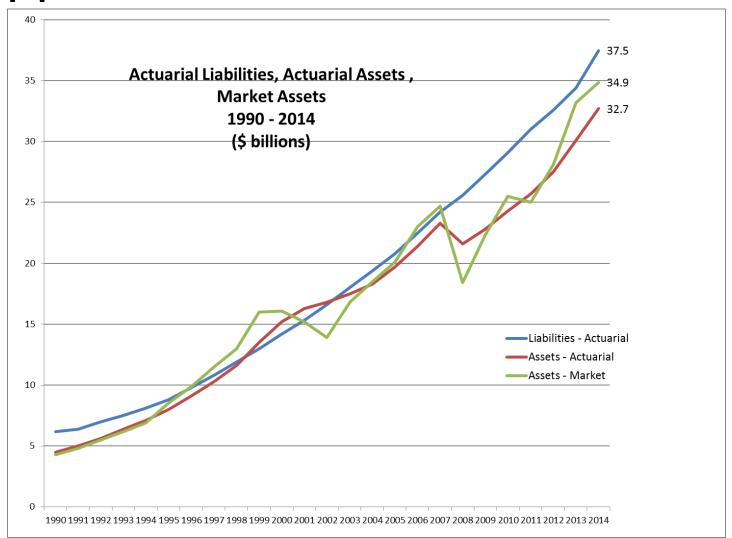

- In 1982, began operating under the "Prudent Person Rule"
- 7.5% assumed return
- Annualized Total Fund return 1982-2014: 10.24%

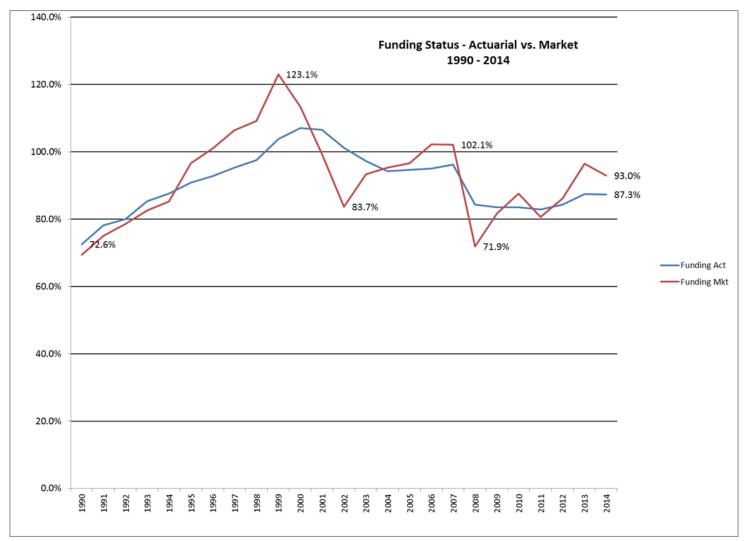

- 6 periods in which IMRF lost money
- 4 periods < 7.5%
- 23 periods > 7.5%
- 20 periods double-digit returns
