How IMRF keeps your information safe

Anyone who watches the news knows that cybersecurity is an ongoing challenge for any organization that stores customer data. IMRF is no exception, facing more than 900 million attempts to breach its firewall each year.

In order to keep your information safe, “cybersecurity has been elevated to the highest levels of attention that IMRF can give,” said Kathy Goerdt, IMRF Performance Excellence Manager.

IMRF’s security approach is three-pronged, according to Glenn Engstrom, IMRF’s Chief Information Security Officer.

“Security is sort of like a triangle,” Engstrom said. “You have people, you have technology, and you have processes. All of these elements play a role in securing members’ information.”

“Security is sort of like a triangle,” Engstrom said. “You have people, you have technology, and you have processes. All of these elements play a role in securing members’ information.”

People

“Our most important way to protect data is to educate the person sitting behind each computer,” Engstrom said.

Any number of high-profile security breaches at other organizations have occurred because of an action taken by someone inside the organization—for example, clicking on a dangerous link in an unsolicited email.

To protect against this kind of attack, IMRF provides ongoing phishing training for its employees. Phishing is fraudulent email that appears to be from a reputable source, but is actually designed to trick the recipient into revealing sensitive information or taking an action that could give a hacker access to their computer.

“Our training is really focused on helping our staff identify when they’re getting email that is dangerous, or could be dangerous,” Engstrom said.

In addition to phishing training, IMRF staff is trained in other security protocols, such as physical security and proper handling of sensitive information. An outside security firm then tests IMRF’s security protocols to ensure that the lessons have been well-learned, reporting back to IMRF about any weaknesses so they can be corrected.

Technology

To support the people on the front lines, IMRF harnesses technology, periodically upgrading its various systems to address changing security concerns.

• Firewall: In early 2017, IMRF upgraded its firewall using the latest security technology in order to better guard against attacks.

How you can protect your personal data

Thieves don’t need to hack into IMRF directly to gain access to your account. You may be able to save yourself time and trouble by taking steps to protect your personal information.

In October 2017, 103 members of the Iowa Public Employees’ Retirement System (IPERS) discovered their member accounts had been compromised when they did not receive their scheduled pension payment.

The Des Moines Register reported that IPERS’s computer system was not hacked. Instead, cybercriminals had obtained stolen Social Security Numbers and other personal information from another source, then used that personal data to register for IPERS online access accounts in those members’ names and change their direct deposit information. (This is one reason that, as a cautionary measure, IMRF doesn’t provide immediate Member Access account access; instead, we send a registration key through the mail to your address on file in order to thwart this type of attack.)

Your account contains personal information like your beneficiaries, service credit, and Member ID Number, so it is to your advantage to keep this information private. (IMRF has purchased cyber-liability insurance to make sure its members are protected in the event of a breach.)

The following tips for protecting your private data, at IMRF and elsewhere, are not a comprehensive list of what to do to keep your information secure, cautions Glenn Engstrom, IMRF’s Chief Information Security Officer. However, taking these steps today will make you safer than you were before.

• Keep your private data private. “Keep your login and password private,” Engstrom said. “Don’t share it with your spouse; don’t share it with your kids. And of course, don’t write it down next to your computer and say ‘this is my password.’ Keep it private, and make it something that you’ll remember.” If you have difficulty remembering your passwords, there are security products that essentially function as a password vault for which you only have to maintain a single password.

• Change your password periodically. “You don’t have to do it every month, but change it a couple times a year,” Engstrom said. If you are hacked or your security is otherwise compromised, change your passwords immediately. “You can even create a whole new Member Access account,” he said.

• Install antivirus software on your computer. “If you don’t have an antivirus, there are plenty of free ones,” Engstrom said. “A lot of Internet service providers have an antivirus that you can download and use.”

• Keep your operating system and your software up to date. “The software companies and especially your operating systems are continually sending updates to ensure your security,” said IMRF Performance Excellence Manager Kathy Goerdt. “If you’re five updates behind, you have a whole bunch of holes that have not been patched.”

• Back up your files and essential information. If you back up your files regularly, not even a malicious hacker will be able to part you from the files you rely on.
2017 Annual Financial Report

Investment portfolio returns 15.73%

IMRF’s fiduciary net position up $4.9 billion last year, $8.1 billion over five years

INVESTMENTS

The IMRF investment portfolio returned 15.73%, after investment-management fees, during 2017. IMRF’s international and U.S. equity performed particularly well during 2017, driving much of the overall return. IMRF’s allocation to international equity returned 27.53% after fees, and IMRF’s U.S. equities returned 19.6% after fees.

IMRF’s long-term goal is to earn an annualized total fund return of 7.5%, after investment-management fees. With a return of 15.73% in 2017, IMRF achieved its goal. IMRF has also achieved its investment return goal over longer time horizons. For example, over the last five years, IMRF has earned 9.7% after paying investment-management fees.

FIDUCIARY NET POSITION

IMRF’s fiduciary net position—total assets minus liabilities—was $41.4 billion as of December 31, 2017. That was an increase of $4.9 billion, or about 13.4%, from 2016. The increase is attributable to strong 2017 investment returns. Over the last five years, IMRF’s fiduciary net position has increased by $8.1 billion.

FUNDING STATUS

IMRF’s funding status is a key indicator of its financial health. It reflects the percentage of benefit promises that IMRF has assets to pay. IMRF strives toward full funding because it guarantees that the system can meet its obligations. Full funding is also most cost-effective for taxpayers.

There are two measures of funding status. Market funding status describes the percentage of assets IMRF has to pay all current and projected benefits, as of a specific date. As of December 31, 2017, IMRF was 98.2% funded on a market basis. IMRF’s market funding status increased from 2016 to 2017 due to strong investment returns.

The other measure is actuarial funding status. For this measure, independent actuaries determine the actuarial value of IMRF assets using a “smoothing” technique that recognizes investment gains and losses over a five-year period. The actuarial funding status is less volatile than the market funding status, which is why it is used to set IMRF contribution rates for participating units of government. As of December 31, 2017, IMRF was 92.9% funded on an actuarial basis.

(Formerly) Lee County

Trudy Williams
Employee Trustee
Fulton County State’s Attorney’s Office

Don’t leave money on the table!
IMRF urges you to apply for your pension now if you are an inactive Tier 1 member who is:
• Vested
• At least age 55
• Not working for a reciprocal system

You might think it is better to wait until age 60 or 62 to start your IMRF pension, but in most cases you will end up losing money by waiting:

The earlier you start payments the more total payments you receive over time.

If you are between 55-60
Although your pension will be reduced since you are under age 60, the earlier you start payments the more total payments you will receive.
Over time you will get more money, even with the reduced amount. The longer you wait, the more payments you will miss out on.

If you are at least 60
You have reached full IMRF retirement age. IMRF pensions do not follow the same rules as Social Security.
Waiting until age 62 or later for your IMRF pension will most likely not increase your pension, and you will be missing out on years of monthly payments.

Visit www.imrf.org or call 1-800-ASK-IMRF (275-4673) if you have any questions.

FUNDAMENTALS
is published twice a year for inactive members of IMRF.
